

solutions overview

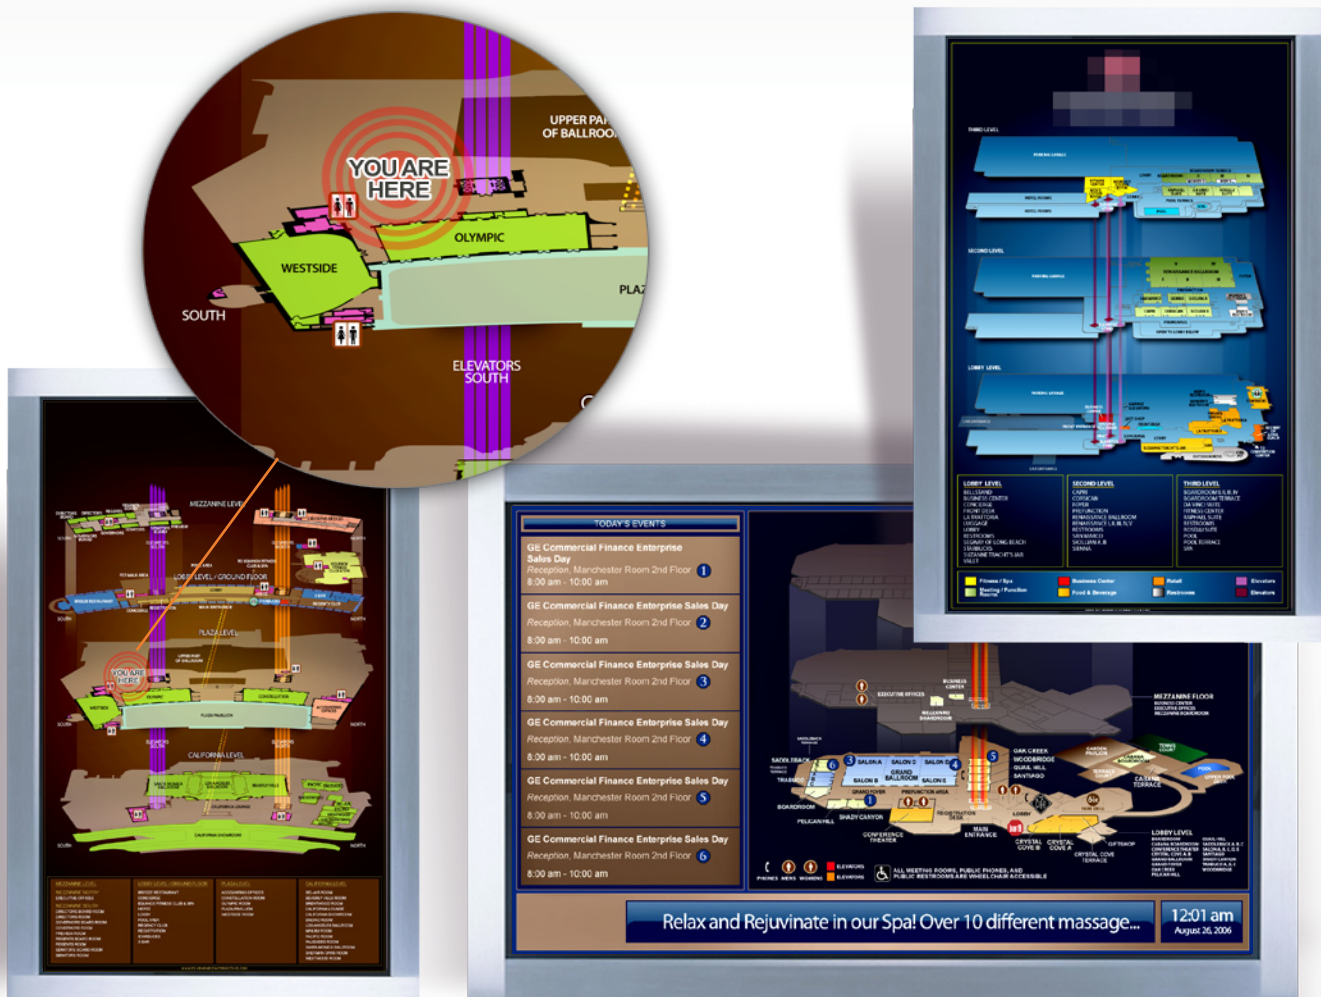

dynamic wayfinding

Give your guests and visitors easy to follow mapping to their destination with dynamic mapping from Four Winds Interactive. Each three dimensional map is custom-designed based on your property maps and floor plans. Animated “You Are Here” icon clearly identifies where the visitor is located on the property, making it easy for the user to identify the quickest route to their destination. The use of directional icons gives an additional element of wayfinding assistance. Directional icons guide guests to the route in which you want them to go, eliminating traffic jams in areas prone to congestion. If you want to add an additional element, allow your guests and visitors to zoom and pan for a close-up view through an interactive interface.

dynamic mapping

features | benefits

- Three dimensional rendering of your property
- Custom designed based on your property maps and floor plans
- Tailor look and feel of map to the décor of your property
- Enable guests to see the entire floorplan of your property
- Animated “You Are Here” icon clearly identifies where the guest is on the property
- Interactivity (optional) allows guests to zoom and pan for close-up view
- Live link between daily events list and map allows animated markers to clearly identify where the event is on the property

solutions overview

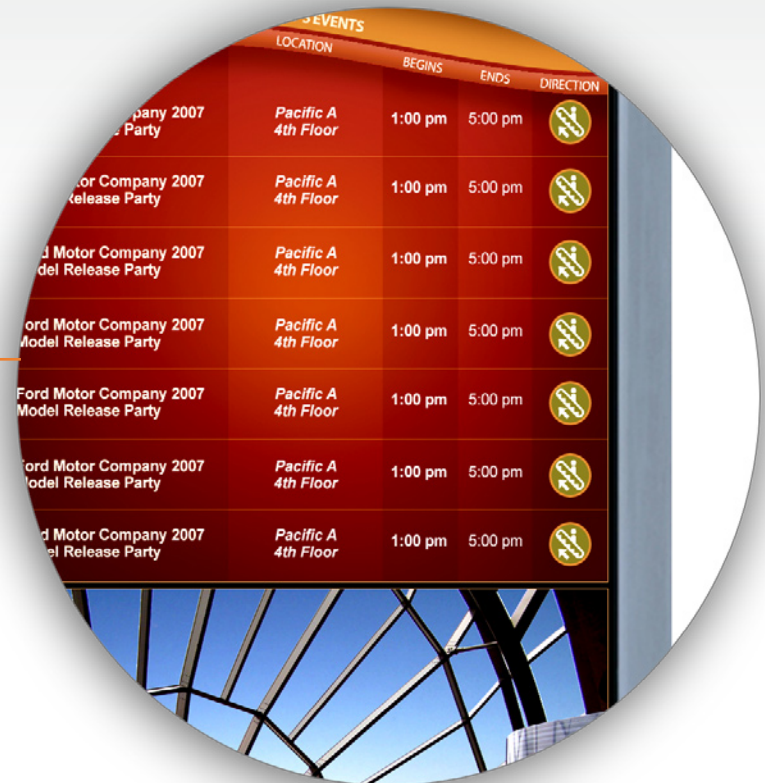

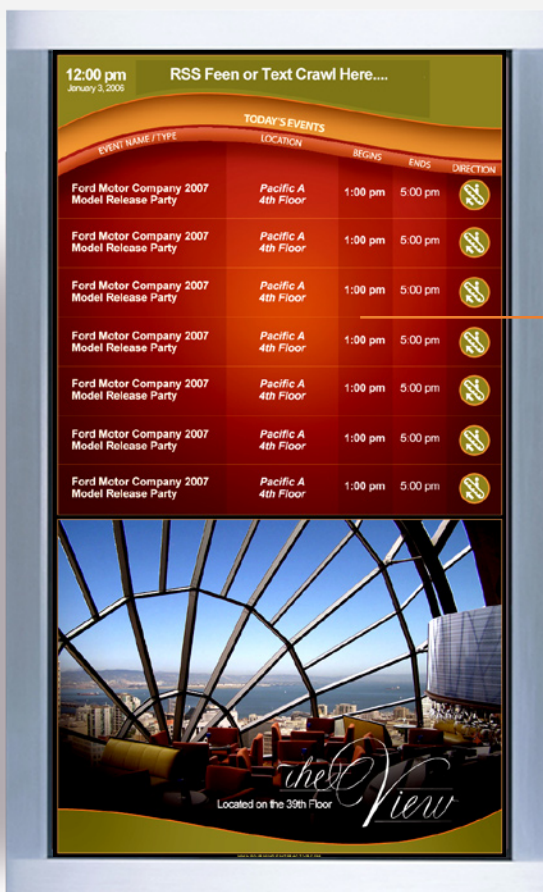

dynamic wayfinding

directional icons

features | benefits

- Dynamically generated directional icons easily guide guests in the right direction for their event.
- Automated generation of icons corresponds with your event list
- Guide the guests to the route in which you want them to go
- Provide additional direction to property locations, limiting confusion
- Give visitors and guests a directional idea of what to do next to get to their destination
- Especially helpful in big properties like large scale hotels, casinos, airports, universities, and convention centers
